

Hospital Governing Boards Committee

The WSHA Hospital Governing Boards Committee consists of a representative sampling of trustees and commissioners from Washington hospitals and one chief executive officer.

The Hospital Governing Boards Committee provides members of hospital governing boards with a forum for discussion and for presenting ideas to WSHA. Committee members will develop educational programs, particularly orientation efforts, to help prepare governing board members and inform them about current issues affecting hospital management. They will also promote and support governing bodies to greater responsiveness to community health needs and collaboration with other community organizations. The committee members will participate in and encourage other governing board members to engage in WSHA advocacy activities. This year's focus includes elevating WSHA's recognition and respect among trustees/commissioners, increasing outreach to board members, and encouraging governing board development.
